

## STOCKOPAM<sup>®</sup> on Alfalfa field – initial irrigation after planting

**This field was treated with Stockopam** – Alfalfa field, initial irrigation after planting.

Stockopam was applied to irrigation water in the head ditch with a PamJammer\*.

Field shows little or no erosion.  
No loss of soil or seed.

**This field was not treated with Stockopam.**

After initial irrigation, soil and seed at the top of the field is washed away.

**Field without Stockopam.**

Another view of above field.

Soil and seed washed away at the head ditch.
